while statement

حل واجبات ال PYTHON

Example: while statement

If you have list of values, write program to count the number that divisible by 3.

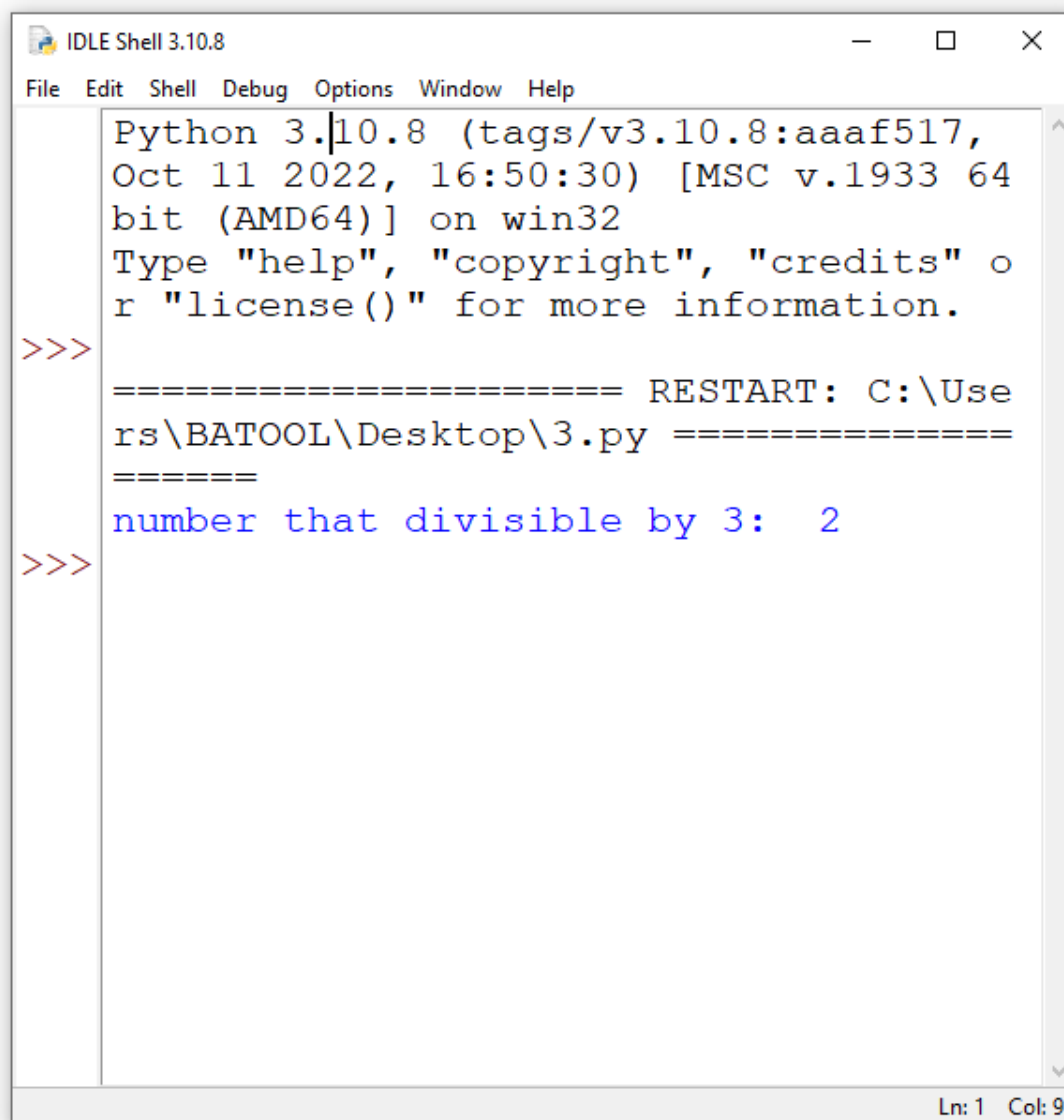

Example: while statement

If you have list of values, write program to select the minimum number and the maximum number.

Example: while statement

Write program that doing summation of list of numbers print the result.

```
l=[1, 2, 3, 9, 20]
c=1
c1=0
while c < (len(l)):
    if l[c]%3==0:
        c1+=1
    c+=1
print("number that divisible by 3: ", c1)
```
